Manuel Arturo Sánchez Brito

Security engineer spanning silicon to cloud. I build and ship commercial security products — from hardware, firmware and networks to offensive tooling, OSINT intelligence and the edge that runs them.

nodo.automatizacion@gmail.com / linkedin.com/in/manuel-sanchez-brito / no-do.dev / Murcia, Spain · CET

SUMMARY

Full-stack security engineer who designs, builds and operates production security systems end to end, with full ownership from silicon to cloud. I built and shipped **two commercial security products** (ready to sell) and architect the edge-first cloud behind them (~40% lower latency) — Python scanning engines, hardened **Cloudflare Workers**, malware reverse-engineering, monitoring, honeypots and live incident response. Roots in hardware and six years mentored inside real network infrastructure (**Infomed**, Cuba's national health network); self-taught since 12 in online security communities. I favour zero-trust defaults, verifiable evidence and fixing the root cause with the smallest possible change.

EXPERIENCE

GRIMZ — Commercial Pentesting Platform — 2025 — Present

Founder & Lead Engineer · Own project · Python, Flask, Stripe · no-do.dev

- Built and shipped a **commercial self-hosted penetration-testing product** end to end: license issuer, store, gated downloads and live Stripe billing.
- Engineered a **deny-by-default scope engine and kill-switch**, a PTY-backed terminal, per-target rate limiting and an isolated Metasploit lab.

TRACEZ — OSINT Intelligence SaaS — 2025 — Present

Founder & Lead Engineer · Own project · Cloudflare Workers, D1, R2, TypeScript · no-do.dev

- Production OSINT and graph-intelligence platform on the **Cloudflare edge** (Workers, D1, R2, KV, WAF) with Google SSO, 2FA, entity merge and Stripe billing.
- Built **tamper-evident evidence** (Ed25519 signing + public verification) and AI-assisted entity expansion with human-in-the-loop.
- Owned the production landing's front-end performance: **mobile Lighthouse 99, CLS 0** across ten consecutive runs.

DEEPWIRE — Recon & Attack-Surface Platform — 2025 — Present

Architect · Own project · Recon engine, Cloudflare Worker, Tailscale, AWS Lightsail

- Architected a standalone recon engine, ran a **security audit** (scope-bypass, CSRF, session-revocation, rate-limit) and designed **private egress** via a Tailscale exit-node so scans never expose home infrastructure.

Security Operations & DFIR — 2024 — Present

Operator · Ghidra, Docker, Prometheus/Grafana, AdGuard, T-Pot

- Uncovered and documented a **large-scale active malware campaign on GitHub** (>170,000 downloads): reverse-engineered a Go loader in Ghidra to identify the Salat Stealer family and its C2 served from GitHub Releases, detonated the sample in an isolated sandbox with controlled egress, and wrote the **end-to-end incident report** (IOCs, C2 domains and OSINT attribution of the operator).
- Ran **end-to-end incident response** on a real infostealer (malware analysis, containment and credential rotation) and operate a Docker monitoring stack (Prometheus, Grafana, Uptime Kuma) with DNS filtering and a T-Pot honeypot.

EARLIER EXPERIENCE

National Medical Library of Cuba — Infrastructure — 2018 — 2024

Havana · six years learning network infrastructure hands-on under the library's systems administrator — a mentor from an early age. Firewalls, public and web services, network administration and day-to-day operations across the **Infomed** ecosystem, Cuba's national health network and one of the region's oldest and largest.

Electronics & Hardware Workshop — 2016 — 2018

Havana · early hands-on apprenticeship in electronics beside technicians with 15+ years' experience: board-level repair, chip programming and hardware reverse-engineering — where my firmware work began (ESP32 / ESP-IDF).

SKILLS

Offensive & DFIR

Pentesting, bug hunting, Nmap/Masscan recon, Metasploit, scope enforcement; malware analysis with Ghidra, incident response, honeypots (T-Pot), OSINT attribution; network traffic analysis and beaconing detection.

Cloud & Networking

Cloudflare Workers/Pages/D1/R2/KV/WAF, Docker, Stripe; Tailscale mesh, DNS, segmentation, controlled egress, Tshark; Prometheus/Grafana/Blackbox.

Hardware & Firmware

Electronics technician; multilayer PCB (KiCad, Flux.ai) for RF; reverse-engineering, chip programming, board-level repair; ESP32/ESP-IDF, MT7612U.

Engineering & AI

Python/Flask, TypeScript + Zod, Go, C#/.NET (Blazor, EF Core), Rust (PyO3 FFI); applied cryptography (AES-GCM, HKDF, Ed25519); local LLMs (Ollama, Qwen), OpenClaw agents, PowerShell automation, CI/CD, Git.

EDUCATION

IT Professional Training

Univ. de las Ciencias Informáticas (UCI), Havana · 2021–2023

Técnico Medio en Electrónica

Eduardo Herrera, Havana, Cuba · 2016–2019

LANGUAGES

Spanish — Native
French — Upper-intermediate
English — Advanced (C1)

OPEN TO

Hybrid or remote — Detection & Response, Cloud Security, Security Engineering, DevSecOps. French & Spanish national; open to travel and relocation.
